

Fox Chase Cancer Center is a world renowned leader in cancer research, prevention, and treatment, and is distinguished as one of the first comprehensive cancer centers designated by the National Cancer Institute. Our employees are deeply involved in every step of the cancer treatment process, from encouraging cancer prevention to researching new procedures, and from conducting clinical trials to instituting the actual treatment. We offer careers that have real meaning.

We currently have a position in our Quality Management Department for an individual to be responsible for the overall planning, coordination, and direction of clinical performance improvement and patient safety projects. Other responsibilities include managing, coordinating and facilitating feasibility studies to identify clinical opportunities for improvement in cost, quality and service; organizing and facilitating clinical process improvement teams and managing the overall coordination of the activities associated with projects; developing integrated clinical project plans, implementation schedules, cost estimates, short-and long-range goals, objectives, and team member roles & responsibilities; working collaboratively with process owners and teams to design and implement process changes, develop policies and operation procedures, and identify key process indicators; monitoring and evaluating program improvements, effectiveness and sustainability; and educating clinical staff and members of the team in process improvement methodology and tools.

Requirements include:

- RN, Bachelor's Degree (healthcare, business or related field) strongly preferred.
- Six Sigma, Lean and/or other process improvement methodology is also preferred.
- Extensive experience in healthcare is a MUST.
- Proficient project management skills (at least 3-5 years of experience preferred); knowledge and ability to think creatively, proactively, and independently; ability to motivate, lead, and interact with a variety of persons throughout the organization; ability to facilitate meetings, prepare reports, and manage data.
- Excellent organizational skills; ability to analyze comprehensive work processes, perform in-depth work analyses, and generate meaningful computer-generated reports; skill in examining and re-engineering operations and procedures, formulating policy, and developing and implementing new strategies and procedures.
- Must possess advanced verbal and written skills; strong interpersonal skills and ability to deal effectively in a team environment; exceptional group facilitation skills; aptitude to educate staff at all levels of the organization.

We offer a salary commensurate with experience plus an exceptional benefits package that includes tuition reimbursement, life, health, dental and disability insurance, paid vacation, sick, holiday and personal days, and daycare center.
